

Everyone gains a little fat over the holidays

just don't clog your drain with it.

Fats, Oils, and Grease (FOG) can damage your home and the environment. When washed down the sink drain, FOG sticks to the insides of sewer pipes. Over time, it can build up and block an entire pipe.

Keep our community healthy. Help prevent sewer overflows and backups by keeping fats, oils and grease out of your drains this holiday season.

For tips on how to properly dispose of FOG, visit www.charlottesville.org/fog or www.serviceauthority.org
